Gas detector **DEGA NS II LCD**

The DEGA NS II LCD detector is a part of the gas detection system and is located in the monitored area, where a critical situation can be created by the accumulation of flammable or toxic substances, even in an explosive environment. The detector converts the measured substance concentration into a unified 4-20 mA current signal. The detector is equipped with an LCD display for displaying the currently measured concentration of the detected substance and four relays. The detector can be connected to DEGA UPA III, DEGA UKA III, and DEGA UDA III evaluation control panels via RS485.

# Gas detection transmitter **DEGA NS III**

The DEGA NS II transmitter is a part of the gas detection system and is located in the monitored area, where a critical situation can be created by the accumulation of flammable or toxic substances, even in an explosive environment. The transmitter converts the measured concentration of substances into a unified 4-20 mA current signal and RS485. The transmitter can be connected to DEGA UPA III, DEGA UKA III, and DEGA UDA III evaluation control panels.
